

“AMAZONE Fertilizer Service” component

Data sheet

Description

Avoid spreading errors and even save time, too. The component „AMAZONE FertiliserService“ defines the correct settings for your AMAZONE fertiliser spreader (ZA-F, ZA-X, ZA-U, ZA-M, ZA-M Ultra, ZG-B, ZG-B Ultra) for all common fertilisers. Clear, easy and precise.

The AMAZONE Fertilizer Service component offers:

- Determination of optimal settings depending on fertiliser, spread rate, working width and driving speed
- Setting recommendations for several plots of land with different spread rates can be created with a single query
- Printing of setting recommendations and orders out of the planning module for field use
- Automatic provision of information on the working width and driving speed from the master data as well as fertilisers and quantity of fertiliser from planning

Price

- The minimum price for the component is 0.50 EUR/month excl. VAT. This allows you to use the component for 50 hectares
- Pricing depending on hectare size of the farm, i.e. the price for 100 ha amounts to 0.83 EUR/month excl. VAT
- The settlement takes place on a monthly basis; together with other components possibly selected by you, if appropriate pro rata temporis invoicing for the component in the first month of use

Note from AMAZONE:

Please be advised that the individual spreading properties of the fertiliser have a great influence on the lateral distribution and spread rate. The settings indicated in the setting chart are therefore only reference values.

The spreading properties depend on

- deviations of physical data (specific weight, granulation, slide characteristics, etc.) even within the same variety and brand
- the different fertiliser characteristics due to weather influences and/or storage conditions

As a result we are not able to guarantee that your fertilizer has the same spreading properties as the fertiliser indicated in the setting chart, even with the same name and from the same manufacturer. The setting recommendations for the lateral distribution refer exclusively to the weight distribution and not to the nutrient distribution (This applies in particular to composite fertilisers). A claim for a compensation for damages is excluded.

Test conditions

- 10-day access free of charge
- The test phase ends automatically, without further obligations
- Unlimited functionality during the test period

Contract terms

Attention: The use of this component is limited to the German market

- Minimum term of one month
- After expiration of the minimum term the contract is automatically extended by one month at a time
- After expiration of the minimum term the contract may be terminated at the end of the current accounting month
- The termination can be submitted by cancelling the component online via the 365FarmNet Shop
- Settlement takes place together with the components booked in the first month of use; if appropriate pro rata temporis invoicing for the component
- Settlement takes place on the basis of the size of farm at the end of the accounting month. Changes in farm size have an impact on the monthly price of the component.
